

ComicCraft - AI Comic Story Creator using Gemini Models

1. Project Overview – ComicCraft

Technology Track: Generative AI with Google

1. Introduction

ComicCraft is a web-based application developed under the Generative AI with Google track. It allows a user to type a simple story idea and automatically receive a complete, illustrated, multi-panel comic strip. The project uses Google's Gemini models for two purposes at once: writing the story script and dialogue, and generating the matching artwork for every panel.

2. What the Project Does

- Takes a short story idea typed by the user as input.
- Splits the story into a sequence of comic panels using Gemini's text generation.
- Writes a caption or dialogue line for each panel.
- Generates artwork for every panel using Gemini's image generation, keeping the art style consistent.
- Combines all panels into one finished, downloadable comic strip.

3. Objective of the Project

The core objective is to make comic creation accessible to people who have no drawing or illustration skill, by letting Google Gemini handle both the storytelling and the artwork, and to demonstrate a practical, working use of Gemini's multimodal (text and image) generation capability.

4. Technology Track

Detail	Description
Track	Generative AI with Google
Project Title	ComicCraft – AI Comic Story Creator using Gemini Models
Core AI Models Used	Gemini text generation model, Gemini image generation model
Output	A downloadable, illustrated, multi-panel comic strip

5. Why This Project Was Chosen

- It directly showcases Gemini's ability to generate both text and images in one connected workflow.

- It solves a real, relatable problem — comic creation without needing artistic skill.
- The final output is a visual, easy-to-understand deliverable that is simple to present and evaluate.
- It is achievable within the training project's timeline using Gemini's available API endpoints.

6. Target Users

- Students who want to illustrate a story, project, or assignment.
- Teachers looking for a quick way to add visuals to a lesson.
- Hobby writers and social media creators who want shareable illustrated content.

7. Summary

ComicCraft brings together Google Gemini's language and image generation strengths into a single, easy-to-use tool that turns a written idea into a finished comic strip, making creative visual storytelling available to anyone, regardless of skill level.
